Before You Get Started

About this Manual

Carefully read all instructions and warnings before operating Any Apex device. Keep this manual in a safe place so that it can be referred to when required.

The latest manual revision can be downloaded from the download section of the Apex website:
<http://www.apex-audio.be/downloads>

This manual describes use of the Apex System Updater.

This application has been carefully designed to provide the user with a way to update all Apex products within a given network from one easy to access location.

Requirements

Before you connect any Apex product to a network, first contact your IT management department and confirm it is safe to do so. Also ensure it is possible have the following ports available, so that it is possible to access and control the Apex devices.

CloudPower Ports:

22
5678

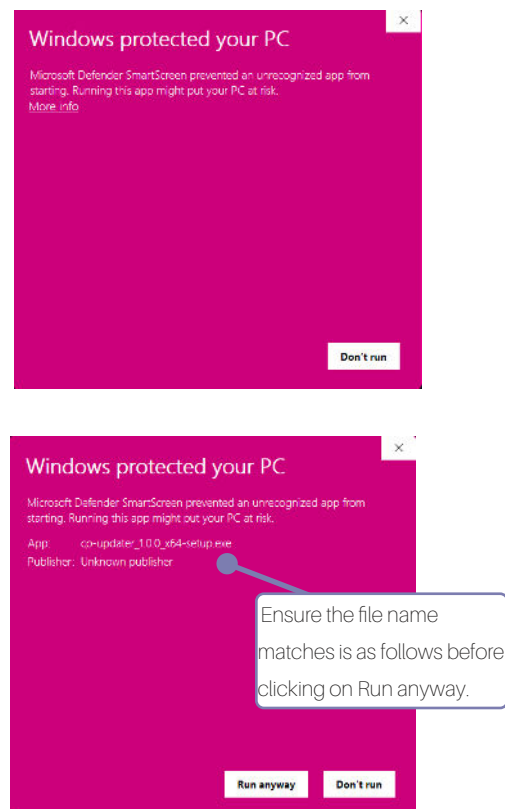

ACW ports:

80
2468

You will also need the latest version of firmware for each Apex device you intend to update on the network.

Installation

The first time you run the .exe you may encounter a Windows protection warning. In order to proceed you must click on more info then run anyway. Then follow all on screen instructions to finish the install.

Application Interface

After opening the application, it will scan your network and identify all Apex products within your network, this will then be shown on the main application screen.

Product model of discovered devices

Device name that can be changed via the Web UI

Software version currently running on the device

Status tab is used to show the current status when the device is being updated

IP Addresses of discovered devices

Settings menu

Devices can be added manually if they have not been discovered automatically

Click on Browse then find and select the version of the firmware you wish to use. If the selected file is valid then it will be shown in green. This file will be stored and used until changed.
